

## NEW KAWASAKI DIAGNOSTIC SYSTEM ESSENTIAL SPECIAL TOOL

Kawasaki established the Essential Special Tool Program to help dealers service Kawasaki products and ensure that repairs are made efficiently without damage to expensive components or aggravating “downtime” for the customers. Through volume purchase and distribution, essential tools will have a reduced cost that is a benefit to all dealers. Please refer to the Essential Tool Policy on K-Dealer.com for further information and return policies (bulletin ST 99-01).

### Kawasaki Diagnostic System Version 3.0 (KDS 3):

KDS 3 was developed to be used with Kawasaki fuel-injected motorcycles, ATVs, and 4-Stroke Jet Ski® watercraft, and is required for servicing the ZG1400A/B Smart system components (KI-PASS, TPMS, and ABS).

Please note that KDS 2 can still be used on fuel-injected ATVs and Jet Ski® watercraft and will be supported through 2009 models. Starting with

model year 2010, these models will require KDS 3. KDS 2 can continue to be used on fuel-injected motorcycles up through 2007 model year but will not be supported beginning with model year 2008.

Although KDS 3 has been initially packaged in kit form and automatically shipped to all motorcycle dealers, each component of the kit can be ordered separately if the need arises. The price for the KDS 3 kit is \$655.35 and will be debited from your dealership’s parts account.

### KDS 3 Kit Components:

57001-1650	KDS 3 CD
57001-1648	Adapter
57001-1649	8-pin communication cable
57001-1688	4-pin communication cable
